CATALOGUE H, SECTION I

THE J. L. MOTT IRON WORKS
NEW YORK

P R E F A C E

IN PRESENTING this new edition of our Fountain Catalogue, we call attention to the many new designs illustrated therein; also to the fact that we have retained of our old designs only those of real beauty and true artistic merit. Altogether showing a line of these goods suitable for use in Lawn, Plaza or Street, which, for completeness and variety, has not been equaled. Should, however, something more elaborate or of larger size and different design be required, we are prepared to furnish special illustrations on application.

We would also say, in this connection, that it is not only our intention to maintain the high character of our work, but to make every effort by the use of the most improved machinery and best mechanical skill, to turn out work perfect in style and finish.

Quite a variety of samples of our work can be seen at our Show Rooms, 84 to 90 Beekman Street, New York.

In ordering from this Catalogue, parties should be very careful to give the Plate Number. The dimensions given in this Catalogue may vary more or less from the actual dimensions of the castings, and we do not hold ourselves responsible for such deviations, nor for typographical errors. Plans of Bases of Fountains and other drawings not shown in Catalogue, will be furnished on application.

The following hints may prove useful and may save trouble and expense to intending purchasers:

THE CHOICE OF FOUNTAIN. As will be seen from the accompanying illustrations, many sizes and descriptions of Fountains are made, and the choice must be guided very much by the space at disposal and the available quantity of water. Where there is an unlimited supply of water, very fine effects may be produced in a variety of ways, the water itself forming the most important feature. Where the quantity of water is small, the more massive designs should be avoided, and the Fountain chosen should be light and elegant. It is to be observed, however, that the same kind of jets are made in a variety of sizes, and a large supply of water is not at all times essential.

THE HEAD OF WATER AND THE WATER SUPPLY. The height or force of a jet depends upon the amount of fall between the reservoir and the Fountain, a minimum of 10 or 12 feet being necessary to produce a proper display. This amount of fall must be reckoned by taking the distance of level between the surface of water in the reservoir and the brass jet at top of Fountain. Where this minimum head of water does not exist, and the force is therefore necessarily small, a pleasant appearance may yet be obtained by having a Fountain with a tier of basins, so that the water, although only bubbling forth at the jet, may, by dripping from one basin to the other, produce a good effect. If there is a very plentiful supply of water, the appearance of a cascade may be produced by having supply pipes of considerable diameter.

GROUND BASINS. These are made from $4\frac{1}{2}$ to $16\frac{1}{2}$ inches deep, and should always be larger in diameter than the largest pan of Fountain. Where space is limited, the Ground Basin should be kept as small as the above condition will allow, but when possible, the diameter should be 3 or 4 feet larger than that of either of the upper pans. A still greater diameter has a good appearance in any open place, and allows the use of jets which scatter the water. Ground Basins can be made of iron, stone, brick or cement. The dimensions and prices of the iron basins are given in price list, and the corresponding illustrations will be found in the body of the Catalogue. Those up to $7\frac{1}{2}$ feet in diameter are complete in one piece, but beyond that size they are in segments jointed in the same way as a tank. Each Basin has a hole in the centre for the supply pipe to enter, and is fitted with a combined overflow and waste valve, ready for connection with an overflow pipe. For large Fountains, where the bottom of the Basin is made of brick and cement, we can furnish our cast iron ornamental **RIMS**, as illustrated in Catalogue and described and priced in Price List.

For convenience of carriage the Fountains are shipped in pieces, duplicate marks or numbers are painted on the parts that join, and everything having been previously fitted, the putting together is a simple matter.

Respectfully,

THE J. L. MOTT IRON WORKS
